Project/App Title:

Bill Break

Project/App Summary:

Application is a way for roommates to split rent and other bills.

Twist:

Explain how your application is different than existing applications online today?
Our application makes it two steps simple to both join an active billing system and leave.

Create 2-week progress schedule and show featured that will be completed every week.

Example:

Week 1 Schedule:

Monday-Tuesday: Research and setup
Wednesday-Thursday: Development
Friday: Delivery and Testing

Week 1 features:

Registration with Facebook for main user
Setups the account and adds the bills

Continue for the rest of the weeks. Remember this is your contract with me so commit to what you **can** complete.

Wire Diagrams:

Shapes and lines about your application. Application flow.

Design Templates:

Color designs. Your application presented in 2d graphics. The story line in graphics.

Database Diagram:

Name of the database, and tables. How will they relate to each other? Screenshots would be good here.

Admin Account
Shared Account

Language and framework:

PHP – Laravel
Bootstrap

Version one:

At the end of 2 week what features will your application have?

2 Account Types

Interface to input bill types

Dynamic distribution of bill between all members on the account

Version two:

If you had more time what will you add to your application?

Reminder emails that are automated

Login with paypal to pay the bills
